Solubility Versus Temperature This chart shows the solubility of various substances in water at a variety of temperatures (in degrees Celsius). Notice how NaCl's solubility is relatively constant regardless of temperature, whereas Na₂SO₄'s solubility increases exponentially over 0-35 degrees Celsius and then abruptly begins to decrease.

Solid Solubility and Temperature | Introduction to Chemistry

The solubility of the majority of solid substances increases as the temperature increases. However, the effect is difficult to predict and varies widely from one solute to another. The temperature dependence of solubility can be visualized with the help of a solubility curve, a graph of the solubility vs. temperature (see figure below).

16.4: How Temperature Influences Solubility - Chemistry ...

Solubility graphs represent the relationship between solubility (in grams of solid per volume of water) vs temperature. If the solution is above the solubility line it is supersaturate and below the solubility line it is unsaturated. Points along the line are points of saturation.

in solubility as temperature rises? NaCl. What substance increases solubility at the slowest rate with increasing temperature? KI. Which solute is the most soluble at 10 °C? 25 °C.

Solubility Graphs Practice Flashcards | Quizlet

Definition of Solubility. Solubility is the ability of a solid, liquid, or gaseous chemical substance (referred to as the solute) to dissolve in solvent (usually a liquid) and form a solution. The solubility of a substance fundamentally depends on the solvent used, as well as temperature and pressure.
